Summary | Highly motivated and detail-oriented recent graduate. Demonstrates strong analytical and problem-solving abilities with a commitment to continuous learning. Seeking an entry-level software role to effectively contribute technical skills and drive organizational success.

Technical Skills

Languages: Python, SQL
Data Analysis and Visualization: NumPy, Pandas, Matplotlib, Seaborn
Machine Learning & AI: Scikit-learn, Supervised Learning
Tools and IDEs: Jupyter Notebook, Google Colab, Visual Studio Code, PyCharm, Git, GitHub
GenAI Tools: Grok (X AI), Microsoft Copilot, ChatGPT, Google Gemini
Office Tools: Microsoft Excel, Word, PowerPoint

Internship

Data Science and Machine Learning with Python

THINK(AI) - A Machine Learning Community

Jan 2023 – Mar 2023

- Applied Python for implementing machine learning algorithms and data visualization techniques.
- Completed five end-to-end projects, including classification and regression tasks.
- Gained hands-on experience with real-world datasets under expert mentorship.

Education

Shri Vishnu Engineering College for Women (A), Bhimavaram <i>Bachelor of Technology in Electrical & Electronics Engineering, CGPA: 8.66</i>	2021–2025
Aditya Junior College, Bhimavaram <i>Intermediate (M.P.C Stream), 92%</i>	2019–2021
Ravindra Bharathi EM High School, Bhimavaram <i>S.S.C, 9.8 GPA</i>	2018–2019

Certifications

- Completed the **TCS ION Career Edge - Young Professional** Course. [View Certificate]
- Finished **Deloitte Data Analytics Virtual Job Simulation** on Forage in data analysis. [View Certificate]
- Pursued **Tata GenAI Powered Data Analytics Job Simulation** on Forage in AI-based data analytics tasks. [View Certificate]

Soft Skills

- Effective in both team collaboration and independent work
- Strong problem-solving, communication, and time-management skills
- Quick learner with adaptability to new tools and technologies
- Detail-oriented and focused on delivering quality outcomes

Projects

Bengaluru House Price Prediction

Objective: Developed a Python model to predict Bengaluru house prices using real-world data and key features.

- Built a regression model to predict house prices using features like location, sqft, BHK, and bath.
- Performed data cleaning, EDA, and feature encoding to improve model accuracy.

Customer Personality Analysis

Objective: Built a Python-based clustering model to segment customers based on behavioral and demographic traits.

- Performed exploratory data analysis on customer data to understand income, spending, and lifestyle patterns.
- Applied K-Means clustering to group customers into segments for targeted marketing strategies.
- Visualized clusters and interpreted customer types using scatter plots and spending trends.
